NEW AIRFIELD NEAR DOMODEDOVO, USSR

Analysis of a small-format aerial photograph taken [REDACTED] has resulted in the identification of a new airfield, under construction (see Figure 1), located at 55-24-37N 37-54-00E, 5 nautical miles south-east of Domodedovo, USSR (see Figure 2). A recent Soviet publication reported that this is a new civil field to service the Moscow area. The runway is oriented northwest-southeast. It was not surfaced at the time of the photography, but the presence of construction equipment indicates that the surface will probably be concrete. Exact dimensions are precluded by the fact that only the southeast two thirds of the field is visible. However, an estimate as to the probable location of the center point of the runway suggests that its length will be approximately 15,000 feet. Airfield facilities appear to be under construction northeast of the runway, but no details are clearly discernible.
